

No Feeding Here!

Please don't throw ANY food around the nest

Food attracts rats, which eat the eggs and cygnets as they hatch out of their shells! It goes mouldy and causes disease!

A mother swan eats hardly anything while sitting on her nest

She can get off for a bit if she is hungry – put her food in the water as usual so she can drink with it

For more information see [theswanfoodproject.co.uk/feeding swans](https://theswanfoodproject.co.uk/feeding-swans)
